

Business Problem Document

Customer Churn Analysis

1. Executive Summary

Customer retention is one of the most important factors influencing business growth and profitability. Acquiring new customers often costs significantly more than retaining existing ones. This project focuses on analyzing customer churn patterns to identify the key factors contributing to customer attrition and provide actionable insights that can help businesses improve customer retention.

Using data analysis techniques, this project explores customer behaviour, service usage, contract information, and demographic characteristics to uncover trends associated with customer churn. The findings can support business teams in designing targeted retention strategies and improving customer lifetime value.

2. Business Problem

Organizations frequently face customer attrition, where customers discontinue their services or stop purchasing products. High churn rates directly impact revenue, increase customer acquisition costs, and reduce long-term profitability.

The business challenge is to answer the following questions:

- Which customer segments are most likely to churn?
- What factors influence customer departure decisions?
- Are there specific services, contracts, or payment methods associated with higher churn rates?
- How can the business proactively reduce customer loss?

Without clear visibility into churn patterns, organizations may struggle to allocate retention resources effectively and may continue losing valuable customers.

3. Project Objective

The primary objective of this project is to analyze historical customer data and identify patterns associated with customer churn.

Specific goals include:

- Measure overall churn performance.
 - Identify customer groups with high churn rates.
 - Discover factors driving customer attrition.
 - Provide business recommendations to improve retention.
 - Create interactive dashboards for business decision-making.
-

4. Scope of Analysis

The analysis covers:

- Customer demographics
- Service subscriptions
- Contract types
- Payment methods
- Customer tenure
- Monthly and total charges
- Churn distribution across customer segments

The project focuses on descriptive and diagnostic analytics rather than predictive modeling.

5. Methodology

Data Collection

Customer data was collected from business records containing customer profiles, service information, billing details, and churn status.

Data Preparation

Data quality checks were performed to identify:

- Missing values
- Inconsistent records
- Duplicate entries
- Data formatting issues

The dataset was cleaned and transformed to ensure reliable analysis.

Exploratory Data Analysis (EDA)

Multiple analytical techniques were applied to:

- Understand customer behavior
- Identify churn trends
- Compare churn rates across different customer groups
- Discover business insights through visual analysis

Dashboard Development

Interactive dashboards were created to enable stakeholders to monitor churn metrics and explore customer segments efficiently.

6. Tools and Technologies

Tool	Purpose
Python	Data Cleaning & Analysis
Pandas	Data Manipulation
Matplotlib	Data Visualization
Seaborn	Statistical Visualization
SQL	Data Querying & Extraction
Power BI	Interactive Dashboard & Reporting

7. Key Business Insights

The analysis revealed several important observations:

- Customers with shorter tenure show higher churn tendencies.
- Certain contract types experience significantly higher churn rates.
- Customers with higher monthly charges are more likely to leave.
- Payment preferences may influence customer retention behavior.
- Long-term customers generally demonstrate stronger loyalty.

These insights help businesses identify high-risk customer groups and prioritize retention efforts.

8. Business Impact

The findings from this project can help organizations:

- Reduce customer attrition.
 - Improve customer satisfaction.
 - Increase customer lifetime value.
 - Optimize retention campaigns.
 - Support data-driven decision-making.
 - Improve revenue stability and long-term growth.
-

9. Recommendations

Based on the analysis, the following recommendations are proposed:

1. Develop targeted retention programs for high-risk customers.
2. Offer loyalty benefits to customers approaching renewal periods.
3. Review pricing strategies for customers with higher monthly charges.
4. Improve customer engagement during the early stages of the customer lifecycle.
5. Monitor churn metrics regularly through business dashboards.

10. Conclusion

Customer churn represents a critical business challenge that directly affects profitability and growth. Through data-driven analysis, this project identifies customer behaviour patterns and business factors associated with churn. The insights generated can support strategic decision-making, improve customer retention initiatives, and contribute to sustainable business performance.

This project demonstrates how analytical tools and business intelligence solutions can transform raw customer data into actionable business insights.
